PROFESSIONAL SUMMARY

Software Engineer with 2+ years of experience building and delivering production web applications across the full stack. I work directly with business departments to turn operational needs into reliable software used daily across projects, engineering, HR, and operations. I also built and operate a commercial multi-tenant SaaS product.

PROFESSIONAL EXPERIENCE

Software Engineer — GTS, Riyadh, Saudi Arabia | Aug 2025 – Present

- Work directly with department heads across projects, engineering, HR, and purchasing to turn manual workflows into internal web applications, from requirements and data modeling through deployment and support.
- Delivered four internal systems now used daily across the company, replacing spreadsheet, paper, and WhatsApp-based workflows.
- Contributed to the development of the company's enterprise intranet platform, a microservices application, delivering new features and enhancements across the system.
- Integrated internal systems with Saudi government services including TAMM and GOSI, and introduced automated notifications and approval workflows.
- Own production support for delivered systems, handling change requests and improvements directly with the departments using them.

Front-End Developer — Relevance Research & Development Corporation (Remote) | Jan 2024 – Jun 2025

- Developed an interactive football cards game platform using Next.js with server-side rendering.
- Reduced bundle size by 30% through code splitting and lazy loading while delivering responsive interfaces across devices.
- Collaborated with designers and backend engineers to integrate APIs, review code, and validate UI/UX feasibility.

KEY PROJECTS

Daftaar — Sales & Installments SaaS daftaar.app

An Arabic-first SaaS for door-to-door cash and installment sales, covering customers, inventory, sales representatives, installment schedules, payments, and collections. Built, deployed, and operated as a live commercial product.

Enterprise Intranet Platform

The company's core internal platform, built as a microservices application spanning HR, finance, sales, warehouse, fleet, and support — from employee records, payroll, leave, and attendance to invoicing, payment requests, stock, and ticketing — with multi-level approval workflows across departments and integrations with government and accounting systems. Contributed to the employee requests module, including submission, approval routing, and OTP verification for sensitive actions, and to the integrations with the Saudi TAMM and GOSI services.

Project Progress Tracking System

A site-progress platform for electro-mechanical construction projects. Imports consultant Revit/IFC models to generate project structure and zone geometry across buildings, levels, and zones. Foremen report progress from mobile devices, managers approve work, and management tracks live completion. Replaced WhatsApp-based reporting while preserving an audit trail for every update.

Fire & Life Safety (FLS) Pricing & Quotation System

A self-service pricing platform for technical departments. Maintains department-specific product catalogues, builds quotations, applies installation and fitting rates, and generates branded PDFs with VAT automatically. Replaced separate Excel-based pricing workflows.

Internal AI Assistant & HR Automation

An internal AI assistant connected to company databases, answering 200+ employees on policies, leave balances, and increment rules, alongside an email-to-form workflow that routes staff requests directly to HR.

Portfolio mofouad.vercel.app

A personal site presenting the production systems above alongside earlier projects, each with a short write-up of the problem it solves and what I built. Designed, built, and deployed by me.

EDUCATION

Bachelor of Computer Science — Menoufia University, Egypt | 2018 – 2022

TECHNICAL SKILLS

- Languages** TypeScript, JavaScript, SQL, HTML, CSS
- Frontend** React.js, Next.js, Redux Toolkit, React Query, Tailwind CSS, SASS, Material UI
- Backend** Node.js, Express.js, REST APIs, JWT authentication
- Databases** PostgreSQL, MongoDB, SQL Server
- Tools** Git, GitHub, Docker, Postman

LANGUAGES

Arabic (native) • English (professional working proficiency)
