PROFESSIONAL SUMMARY

Software Engineer with 2+ years of experience building and delivering production web applications across the full stack. I work directly with business departments to replace manual workflows with software they use daily across projects, engineering, HR, and operations. I also built and operate a commercial SaaS product serving small businesses.

PROFESSIONAL EXPERIENCE

Software Engineer — GTS, Riyadh, Saudi Arabia | Aug 2025 – Present

- Work with department heads across projects, engineering, HR, and purchasing to identify manual processes worth automating, and deliver them as internal web applications end to end — requirements, data model, interface, deployment, and support.
- Delivered three internal systems now in daily use across the company, each replacing spreadsheets, paper, or WhatsApp-based workflows.
- Integrated company systems with Saudi government services including TAMM and GOSI, and added automated notification and approval workflows that removed routine follow-up from managers and HR.
- Support every delivered system in production, handling change requests directly from the departments using them.

Front-End Developer — Relevance Research & Development Corporation (Remote) | Jan 2024 – Jun 2025

- Developed an interactive football cards game platform using Next.js with server-side rendering.
- Reduced bundle size by 30% through code splitting and lazy loading, and built responsive interfaces across all devices.
- Collaborated with designers and backend engineers to integrate APIs and validate the technical feasibility of UI/UX designs.

KEY PROJECTS

Daftaar — Sales & Installments SaaS daftaar.app

An Arabic-first SaaS for door-to-door cash and installment sales: customers, inventory, sales representatives, installment schedules, payments, and collections in one system. Built, deployed, and operated as a live commercial product.

Enterprise Intranet Platform

The company's internal platform for staff across the organisation. Worked on the employee requests workflow — submission, routing, and approval — an OTP verification step for sensitive actions, and integrations with the Saudi TAMM and GOSI services so employee and company records are pulled in directly.

Project Progress Tracking System

A site-progress platform for electro-mechanical construction projects. The consultant's Revit/IFC model is imported to generate the project structure and zone geometry automatically, breaking each project into buildings, levels, and zones. Foremen report progress from a phone on site, Construction and Project Managers approve the work, and completion per building is tracked live. Replaced WhatsApp-based reporting, with every update kept as an audit trail.

Fire & Life Safety (FLS) Pricing & Quotation System

A self-service pricing platform for technical departments. Each department maintains its own product catalogue, builds quotations from it, and applies percentage-based rates for installation, fitting, and accessories on top of material cost. Quotations are issued as branded PDFs with VAT applied automatically, replacing the Excel workbooks each department used to keep.

Internal AI Assistant & HR Automation

A chatbot connected to company databases that answers 200+ employees on policies, leave balances, and increment rules, with an email-to-form workflow that routes staff requests straight to HR.

EDUCATION

Bachelor of Computer Science — Menoufia University, Egypt | 2018 – 2022

TECHNICAL SKILLS

- Languages** JavaScript, TypeScript, SQL, HTML, CSS
- Frontend** React.js, Next.js, Redux Toolkit, React Query, Tailwind CSS, SASS, Material UI
- Backend** Node.js, Express.js, REST APIs, JWT authentication
- Databases** PostgreSQL, MongoDB, SQL Server
- Tools** Git, GitHub, Docker, Postman

LANGUAGES

Arabic (native) • English (professional working proficiency)
